

Seamless Bagdrop

The Biometric CUSS 2 Self-Service Bag drop Solution:

The combination of high-quality biometrics capture with footprint optimisation.

The **Seamless Bagdrop** combined with the future proof biometric enabled platform rewrites the check-in experience and replaces the traditional counters, resulting in a more efficient and streamlined seamless process with no queues.

The Seamless Bagdrop flexible design addresses retrofit and new fit bagdrop requirements, adjusting to airport infrastructure as needed and is the only bagdrop that supports natively from common-use CUSS 1 and the latest CUSS 2.x to a fully dedicated environment. It is fully integrated with our well-known user centric biometrically enabled Vision-Box Seamless Journey Platform, that orchestrates the best-in-class biometric experience for the travelers, while adapting the flow according to the business needs by supporting different bag drop processes, such as one-step or two-steps.

The gently curved front gives a welcoming appearance with an ergonomically correctly angled screen, and enough space for e.g. PRM users to operate the screen. The conveyor belt is lowered in order to ease the baggage drop. Furthermore, the conveyor belt in front of the bag drop creates a small, private space for the user in the check-in area.

The design is award winning and was created with a strong focus on usability, aesthetics, functionality and durability, and this combination of design parameters in partnership with Marcus Pedersen has given the product a worldwide market position. The product has shown the market that - through design - a highly complex machine can also contribute positively to the passenger experience and the architectural environment.

Key features

- CUSS 2.x and 1.x
- Compact form factor
- Full control for Airport and Airline management
- Flexible installation methods
- Future proof solution
- Accessible by design
- One step or two steps
- Small footprint
- Seamless integration
- Intuitive dashboard
